<p align="center">NGSS Performance Expectations for High School Life Science</p>	<p align="center">Campbell Biology In Focus, 4th Edition, AP[®] Edition, © 2025</p>
<p>(HS-LS1) From Molecules to Organisms: Structures and Processes</p>	
<p>(HS-LS1-1) Construct an explanation based on evidence for how the structure of DNA determines the structure of proteins, which carry out the essential functions of life through systems of specialized cells.</p>	<p>Chapter 3: Carbon and the Molecular Diversity of Life Concept 3.6: Nucleic Acids store, transmit, and help express hereditary information, pp. 66-68</p> <p>Chapter 4: A Tour of the Cell Concept 4.2: Eukaryotic cells have internal membranes that compartmentalize their function, pp. 77-80 Concept 4.3: The Eukaryotic cell's genetic instructions are housed in the nucleus and carried out by the ribosomes, pp. 82-84 Concept 4.4: The endomembrane system regulates protein traffic and performs metabolic functions, pp. 84-88</p>
<p>(HS-LS1-2) Develop and use a model to illustrate the hierarchical organization of interacting systems that provide specific functions within multicellular organisms.</p>	<p>Chapter 1: Introduction: Evolution and the Foundations of Biology Concept 1.1: The Study of life reveals unifying themes, p. 3</p> <p>Chapter 18: Genomes and Their Evolution Concept 18.2: Scientists use bioinformatics to analyze genomes and their functions, pp. 373-376</p> <p>Chapter 32: The Internal Environment of Animals: Organization and Regulation Concept 32.1: Animal form and function are correlated at all levels of organization, pp.692-696</p>
<p>(HS-LS1-3) Plan and conduct an investigation to provide evidence that feedback mechanisms maintain homeostasis.</p>	<p>Chapter 32: The Internal Environment of Animals: Organization and Regulation Concept 32.3: Feedback control maintains the internal environment in many animals, pp. 701-706 Concept 32.4: A shared system mediates osmoregulation and excretion in many animals, pp. 706-710 Concept 32.5: The mammalian kidney's ability to conserve water is a key terrestrial adaptation, pp. 711-714</p> <p>Chapter 33: Animal Nutrition Concept 33.5: Feedback circuits regulate digestion, energy allocation, and appetite, pp. 730-734</p>

<p align="center">NGSS Performance Expectations for High School Life Science</p>	<p align="center">Campbell Biology In Focus, 4th Edition, AP[®] Edition, © 2025</p>
<p>(HS-LS1-4) Use a model to illustrate the role of cellular division (mitosis) and differentiation in producing and maintaining complex organisms.</p>	<p>Chapter 9: The Cell Cycle Concept 9.1: Most cell division results in genetically identical daughter cells, pp. 189-191 Concept 9.2: The mitotic phase alternates with interphase in the cell cycle, pp. 191-197</p> <p>Chapter 16: Development, Stem Cells, and Cancer Concept 16.1: A program of differential gene expression leads to the different cell types in a multicellular organism, pp. 334-341</p> <p>Chapter 28: Vascular Plant Structure and Growth Concept 28.2: Different meristems generate new cells for primary and secondary growth pp. 608-610</p> <p>Chapter 36: Reproduction and Development Concept 36.3: The interplay of tropic and sex hormones regulates reproduction in mammals, pp. 789-796</p>
<p>(HS-LS1-5) Use a model to illustrate how photosynthesis transforms light energy into stored chemical energy.</p>	<p>Chapter 8: Photosynthesis <i>Concept 8.1: Photosynthesis feeds the biosphere, p. 167</i> <i>Concept 8.2: Photosynthesis converts light energy to the chemical energy of food, pp. 168-171</i> <i>Concept 8.3: The light reactions convert solar energy to the chemical energy of ATP and NADPH, pp. 171-179</i></p>
<p>(HS-LS1-6) Construct and revise an explanation based on evidence for how carbon, hydrogen, and oxygen from sugar molecules may combine with other elements to form amino acids and/or other large carbon-based molecules.</p>	<p>Chapter 3: Carbon and the Molecular Diversity of Life Concept 3.1: Carbon atoms can form diverse molecules by bonding to four other atoms, pp 45-49 Concept 3.5: Proteins include a diversity of structures, resulting in a wide range of functions, pp. 57-65</p>
<p>(HS-LS1-7) Use a model to illustrate that cellular respiration is a chemical process whereby the bonds of food molecules and oxygen molecules are broken and the bonds in new compounds are formed, resulting in a net transfer of energy.</p>	<p>Chapter 6: An Introduction to Metabolism Concept 6.1: An organism’s metabolism transfers matter and energy. PP. 128-130</p> <p>Chapter 7: Cellular respiration and Fermentation Concept 7.1: Catabolic pathways yield energy by oxidizing organic fuels, pp. 147-151</p>
<p>(HS-LS2) Ecosystems: Interactions, Energy, and Dynamics</p>	
<p>(HS-LS2-1) Use mathematical and/or computational representations to support explanations of factors that affect carrying capacity of ecosystems at different scales.</p>	<p>Chapter 40: Population Ecology and the Distribution of Organisms Concept 40.5: The exponential and logistic models describe the growth of populations, pp 890-894</p> <p>Chapter 43: Conservation Biology and Global Change Concept 43.5: The human population is no longer growing exponentially but is still increasing rapidly, pp. 964-966</p>

<p align="center">NGSS Performance Expectations for High School Life Science</p>	<p align="center">Campbell Biology In Focus, 4th Edition, AP[®] Edition, © 2025</p>
<p>(HS-LS2-2) Use mathematical representations to support and revise explanations based on evidence about factors affecting biodiversity and populations in ecosystems of different scales.</p>	<p>Chapter 19: Descent with Modification Concept 19.1: The Darwinian revolution challenged traditional views of a young Earth inhabited by unchanging species, pp. 396-398</p> <p>Chapter 23: Broad Patterns of Evolution Concept 23.2: The rise and fall of groups of organisms reflect differences in speciation and extinction rates, pp. 479-487</p> <p>Chapter 43: Conservation Biology and Global Change Concept 43.1: Human activities threaten Earth's biodiversity, pp. 943-947</p>
<p>(HS-LS2-3) Construct and revise an explanation based on evidence for the cycling of matter and flow of energy in aerobic and anaerobic conditions.</p>	<p>Chapter 26: The Colonization of Land Concept 26.5: Plants and fungi fundamentally changed chemical cycling and biotic interactions, pp. 562-565</p> <p>Chapter 42: Ecosystems and Energy Concept 42.4: Biological and geochemical processes cycle nutrients and water in ecosystems, pp. 930-935</p>
<p>(HS-LS2-4) Use mathematical representations to support claims for the cycling of matter and flow of energy among organisms in an ecosystem.</p>	<p>Chapter 26: The Colonization of Land Concept 26.5: Plants and fungi fundamentally changed chemical cycling and biotic interactions, pp. 562-565</p> <p>Chapter 42: Ecosystems and Energy Concept 42.4: Biological and geochemical processes cycle nutrients and water in ecosystems, pp. 930-935</p>
<p>(HS-LS2-5) Develop a model to illustrate the role of photosynthesis and cellular respiration in the cycling of carbon among the biosphere, atmosphere, hydrosphere, and geosphere.</p>	<p>Chapter 7: Cellular Respiration and Fermentation Concept 7.1: Catabolic pathways yield energy by oxidizing organic fuels, pp. 147-151</p> <p>Chapter 26: The Colonization of Land Concept 26.5: Plants and fungi fundamentally changed chemical cycling and biotic interactions, pp. 562-565</p> <p>Chapter 42: Ecosystems and Energy Concept 42.4: Biological and geochemical processes cycle nutrients and water in ecosystems, pp. 930-935</p>

<p align="center">NGSS Performance Expectations for High School Life Science</p>	<p align="center"><i>Campbell Biology In Focus, 4th Edition, AP[®] Edition, © 2025</i></p>
<p>(HS-LS2-6) Evaluate the claims, evidence and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem.</p>	<p>Chapter 23: Broad Patterns of Evolution Concept 23.2: The rise and fall of groups of organisms reflect differences in speciation and extinction rates, pp. 479-487 Concept 23.3: Major changes in body form can result from changes in the sequences and regulations of developmental genes, pp. 487-490</p> <p>Chapter 40: Population Ecology and the Distribution of Organisms Concept 40.5: The exponential and logistic models describe the growth of populations, pp. 890-894</p> <p>Chapter 41: Ecological Communities Concept 41.3: Disturbance influences species diversity and composition, pp. 911-914</p> <p>Chapter 43: Conservation Biology and Global Change Concept 43.1: Human activities threaten Earth's biodiversity, pp. 943-947</p>
<p>(HS-LS2-7) Design, evaluate, and refine a solution for reducing the impacts of human activities on the environment and biodiversity.</p>	<p>Chapter 42: Ecosystems and Energy Concept 42.5: Restoration ecologists return degraded ecosystems to a more natural state, pp. 935-937</p> <p>Chapter 43: Conservation Biology and Global Change Concept 43.1: Human activities threaten Earth's biodiversity, pp. 942-947 Concept 43.3: Landscape and regional conservation help sustain biodiversity, pp. 952-955 Concept 43.4: Earth is changing rapidly as a result of human actions, pp. 955-964</p>
<p>(HS-LS2-8) Evaluate the evidence for the role of group behavior on individual and species' chances to survive and reproduce.</p>	<p>Chapter 41: Ecological Communities Concept 41.1: Interactions between species may help, harm, or have no effect on the individuals involved, pp. 901-907</p> <p>Chapter 43: Conservation Biology and Global Change Concept 43.1: Human activities threaten Earth's biodiversity, pp. 943-947 Concept 43.4: Earth is changing rapidly as a result of human actions, pp. 955-964</p>

<p align="center">NGSS Performance Expectations for High School Life Science</p>	<p align="center">Campbell Biology In Focus, 4th Edition, AP[®] Edition, © 2025</p>
<p>(HS-LS3) Heredity: Inheritance and Variation of Traits</p>	
<p>(HS-LS3-1) Ask questions to clarify relationships about the role of DNA and chromosomes in coding the instructions for characteristic traits passed from parents to offspring.</p>	<p>Chapter 1: Introduction: Evolution and the Foundations of Biology Concept 1.1: The study of life reveals unifying themes, pp. 3-9</p> <p>Chapter 3: Carbon and the Molecular Diversity of Life Concept 3.7: Genomics and proteomics have transformed biological inquiry and applications, pp. 68-69</p> <p>Chapter 10: Meiosis and Sexual Life Cycles Concept 10.1: Offspring acquire genes from parents by inheriting chromosomes, pp. 208-209</p> <p>Chapter 11: Mendel and the Gene Idea Concept 11.1: Mendel used the scientific approach to identify two laws of inheritance, pp. 222-228</p> <p>Chapter 12: The Chromosomal Basis of Inheritance Concept 12.1: Mendelian inheritance has its physical basis in the behavior of chromosomes, pp. 245-247</p>
<p>(HS-LS3-2) Make and defend a claim based on evidence that inheritable genetic variations may result from (1) new genetic combinations through meiosis, (2) viable errors occurring during replication, and/or (3) mutations caused by environmental factors.</p>	<p>Chapter 10: Meiosis and Sexual Life Cycles Concept 10.4: Genetic variation produced in sexual life cycles contributes to evolution, pp. 218-219</p> <p>Chapter 12: The Chromosomal Basis of Inheritance Concept 12.3: Linked genes tend to be inherited together because they are located near each other on the same chromosome, pp. 250-256</p> <p>Chapter 21: The Evolution of Populations Concept 21.1: Genetic variation makes evolution possible, pp. 432-435 Concept 21.3: Natural selection, genetic drift, and gene flow can alter allele frequencies in a population, pp. 439-443</p>
<p>(HS-LS3-3) Apply concepts of statistics and probability to explain the variation and distribution of expressed traits in a population.</p>	<p>Chapter 10: Meiosis and Sexual Life Concept 10.4: Genetic variation produced in sexual life cycles contributes to evolution, pp. 218-219</p> <p>Chapter 11: Mendel and the Gene Idea Concept 11.1: Mendel used the scientific approach to identify two laws of inheritance, pp. 222-228 Concept 11.2: Probability laws govern Mendelian inheritance, pp. 228-230</p> <p>Chapter 21: The Evolution of Populations Concept 21.1: Genetic variation make evolution possible, pp 432-435 Concept 21.3: Natural selection, genetic drift, and gene flow can alter allele frequencies in a population, pp. 439-443</p>

<p align="center">NGSS Performance Expectations for High School Life Science</p>	<p align="center"><i>Campbell Biology In Focus, 4th Edition, AP[®] Edition, © 2025</i></p>
<p>(HS-LS4) Biological Evolution: Unity and Diversity</p>	
<p>(HS-LS4-1) Communicate scientific information that common ancestry and biological evolution are supported by multiple lines of empirical evidence.</p>	<p>Chapter 19: Descent with Modification Concept 19.3: Evolution is supported by an overwhelming amount of scientific evidence, pp. 404-407</p> <p>Chapter 20: Phylogeny Concept 20.1: Phylogenies show evolutionary relationships, pp 413-416</p>
<p>(HS-LS4-2) Construct an explanation based on evidence that the process of evolution primarily results from four factors: (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.</p>	<p>Chapter 1: Introduction: Evolution and the Foundations of Biology Concept 1.2: The Core Theme: Evolution accounts for the unity and diversity of life, pp. 9-13</p> <p>Chapter 10: Meiosis and the Sexual Life Cycles Concept 10.4: Genetic variation produced in sexual life cycles contributes to evolution, pp. 218-219</p> <p>Chapter 12: The Chromosomal Basis of Inheritance Concept 12.3: Linked genes tend to be inherited together because they are located near each other on the same chromosome, pp. 250-256</p> <p>Chapter 18: Genomes and Their Evolution Concept 18.5: Duplication, rearrangement, and mutation of DNA contribute to genome evolution, pp. 382-387 Concept 18.6: Comparing genome sequences provides clues to evolution and development, pp. 387-391</p> <p>Chapter 19: Descent with Modification Concept 19.2: Descent with modification by natural selection explains the adaptations of organisms and the unity and diversity of life, pp. 398-403</p> <p>Chapter 21: The Evolution of Populations Concept 21.4: Natural selection is the only mechanism that consistently causes adaptive evolution, pp. 443-450</p> <p>Chapter 39: Motor Mechanisms and Behavior Concept 39.5: Selection for individual survival and reproductive success can explain diverse behaviors, pp. 863-865</p> <p>Chapter 40: Population Ecology and the Distribution of Organisms Concept 41.1: Interactions between species may help, harm, or have not effect on the individuals involved, pp. 901-907</p>
