

# Let's Go on a Math Walk!

## Getting Started

- Select a real-world location for your Math Walk, such as an art exhibit, a park or nature trail, your neighborhood, a workplace, or a hobby spot like a skate park or music studio.
- The Math Walk location should have interesting details that you can observe, such as shapes, patterns, sizes, and amounts.
- Think of math questions about what you see.

## Show Your Math Walk

Use the blank space on the back to **bring your Math Walk to life**. For example, you could design a graphic novel cover, make a junk journal page, or draw a comic strip with 3 or 4 panels.
